SUBJECT: APPLICATION FOR SOFTWARE ENGINEER ROLE

Dear Hiring Team,

I am writing to apply for the Software Engineer position at Field Nation. I am a Full-Stack Software Engineer with over two years of experience developing scalable SaaS solutions, which aligns directly with the requirements of this role.

My expertise is centered on the **JavaScript/TypeScript** ecosystem, with extensive hands-on experience in building and maintaining backend services using **Node.js** and frontend applications with **React**. My background includes working with both monolithic and **microservice architectures**, designing and consuming **REST APIs**, and managing databases like **MySQL**.

At my previous role at Shaitrish, I was instrumental in engineering core features for the Course37 LMS a live B2B SaaS platform hosted on **AWS** and serving over 50 organizations. My work focused on enhancing performance and scalability, which involved transitioning parts of the system toward a more robust, service-oriented architecture. My engineering philosophy is to solve complex problems by addressing root causes, whether that involves optimizing database queries, re-architecting services for better resilience, or working directly with containerized environments.

- **Backend Development:** Engineered and enhanced scalable backend services using **Node.js** and **TypeScript**, contributing to a system transitioning towards a **microservice architecture**. Proficient with **PHP** and **MySQL**.
- **Frontend Engineering:** Built and maintained responsive frontend components for a complex web application using **React** and modern **ES6+** JavaScript, ensuring clean, standards-compliant HTML and CSS.
- **Containerization & DevOps:** Utilized **Docker** for service deployment, including engineering a raw TCP solution to interface directly with Docker containers on **Linux** systems, bypassing framework limitations and managing OS-level processes.

I anchor my technical capabilities in shipped products and a deep understanding of the full software development lifecycle. I am proficient with version control using **Git** and thrive in collaborative, team-based environments.

I am confident that my experience in building resilient, high-performance SaaS applications and my proficiency with your core technology stack **Node.js, React, TypeScript, MySQL, and Docker** will allow me to make an immediate and significant contribution to the Field Nation team. I am available to work from 1 PM to 10 PM BD time and welcome the opportunity to discuss my qualifications further.

Sincerely,
Md. Ramjan Miah
